

NTSB Presents Safety Seminar on Instructional Accidents

WASHINGTON – The National Transportation Safety Board is presenting a seminar highlighting the lessons learned from NTSB's accident investigations involving instructional accidents. While statistically, the probability of having an accident while training for a pilot certificate is still less than in other types of general aviation flying, developing an understanding of when these accidents occur, may reduce this accident rate even further. Industry and government research has identified risks involved in both solo and dual instructional flights; and this information will be presented during the seminar. Please see the complete details in the Additional Information Section of this announcement.

Directions: See the maplink at faasafety.gov

A message from the National FAASTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at www.FAASafety.gov!
